VoiceBloom AAC: product summary for clinicians

For feature matching and funding letters. November 2026.

What it is

VoiceBloom AAC is speech-generating software for augmentative and alternative communication, made for children. The child selects symbols and the device speaks the message aloud.

Vocabulary and language

More than 8,000 symbols, combining ARASAAC pictograms with custom illustrations. A core word bar with Fitzgerald Key colour coding. Folder-style categories with subcategories. Custom symbols, including photos, can be added for each child. Speech output in 9 languages.

Platforms

iOS, Android and web, including Chromebooks. The board works offline.

Access

Direct selection by touch. Ask us about your client's access needs before recommending VoiceBloom for a child who needs an alternative access method.

Progress and reporting

Use is recorded as the child communicates. Families and linked clinicians can see progress in the app, receive weekly summaries and generate IEP reports.

Word suggestions

An optional suggestion row predicts likely next words from the symbols the child has tapped. It is off by default.

Accounts and privacy

A family account holds up to 3 child profiles. A family can link a clinician to a child and can remove that access at any time. Details are in our privacy policy at voicebloom.ca/privacy.

Cost

Lifetime access: $449 CAD plus applicable tax, one payment, updates included. Yearly plan: $199.99 CAD per year, or $19.99 per month. A 30-day free trial is available. Clinic accounts are free.

Company

VoiceBloom Inc., 103-2727 Steeles Ave W, North York, ON M3J 3G9, Canada. GST/HST 741704571 RT0001.

Prepared by VoiceBloom Inc. for clinicians completing a feature match. This sheet describes what the product does and makes no clinical claims. Whether VoiceBloom suits a child is the clinician's decision. Questions or an evaluation account: info@voicebloom.ca
